

TELEDYNE HASTINGS INSTRUMENTS

APPLICATION NOTES

GOAL: Transformer DeGas System

South Carolina Electric & Gas has chosen the Model 2002 Dual Sensor to pump out transformers prior to oil fill. The fill process begins at atmosphere and evacuates to a vacuum of approximately 200 microns. The Model 2002 permits the use of a single instrument where multiple instruments were once required. Rapid response permits accurate process control and the reduction of manufacturing cycle time. The Hastings Model 2002 is highly regarded for its ease of use over the wide dynamic range.
